

## Condition codes for FAC devices (continued)

## Magnetic tape write operation

cc=1 (Error)	Parity error detected
cc=2 (Normal)	I/O normal
cc=3 (Flag)	Tried an action prohibited by tape access mask of A register (Model 21 only)
cc=4 and 1 (Fault)	End-of-tape reflective marker sensed and no parity errors were detected
	Attempted to write on a read-only tape
	The tape drive was switched to local during the write operation
	Another tape drive with the same address was switching on-line during the write operation
	Instruction addressed a non-existent drive, or a drive which was not on-line
	Tried an action prohibited by tape access mask of A register (Model 22 only)

## Magnetic tape control operation

cc=2 (Normal)	I/O normal
cc=3 (Flag)	Tried an action prohibited by tape access mask of A register (Model 21 only)
cc=4 and 1 (Fault)	Tape mark was spaced over during forwardspace block or during backspace block D was sent by a write control instruction when a read-only tape was mounted
	Tape drive was switched to local during the control operation
	The tape was already positioned at a load point when backspacing was requested
	Instruction addressed a non-existent drive, or a drive which was not on-line
	Tried an action prohibited by tape access mask of A register (Model 22 only)
